***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

Claims 1-14 and 16-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

2. Claims 1 recites the limitation "the adjacent ones" in line 6, and claim 16 recites the limitation "the operation" in line 1. There is insufficient antecedent basis for this limitation in the claim. Claims 2-14 depend on claim 1 and claims 17-20 depend on claim 17, therefore, claims 2-14 and 17-20 are rejected for the same reason that claims 1 and 16 are rejected.

***Allowable Subject Matter***

3. Claim 15 is allowed over prior art.
4. Claim 1 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.
5. Claims 2-14 and 16-20 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
6. The following is a statement of reasons for the indication of allowable subject matter: Although the cited prior art discloses filtering processes and delay structure for sub-bands associated in a telecommunication system whereby the introduction of sub-band reconstruction (recovery) is presented wherein the architecture includes a process

of sampling, sample rate associated with reconstruction/recovery, sampling points, general causal filters/anti-general causal filters, LMS filter, conditioning portions of signal, pre-filtering, temporal whitening, they fail to teach or suggest a pre-filter sample coupled to receive the separate filter values formed by data-part isolating filter for each of first and at least second sub-bands, pre-filter rejection filter coupled to a pre-filter sampler and data-part isolating a filter coupled to receive indications of values of the data.
